

VALUE PROPOSITION

Enterprise-grade analytics. Built for SMEs.

Advanced analytics is no longer reserved for companies with big budgets. AI has changed the game — and I can make it worth it.

WELCOME

Every organization has data. Very few turn it into clarity.

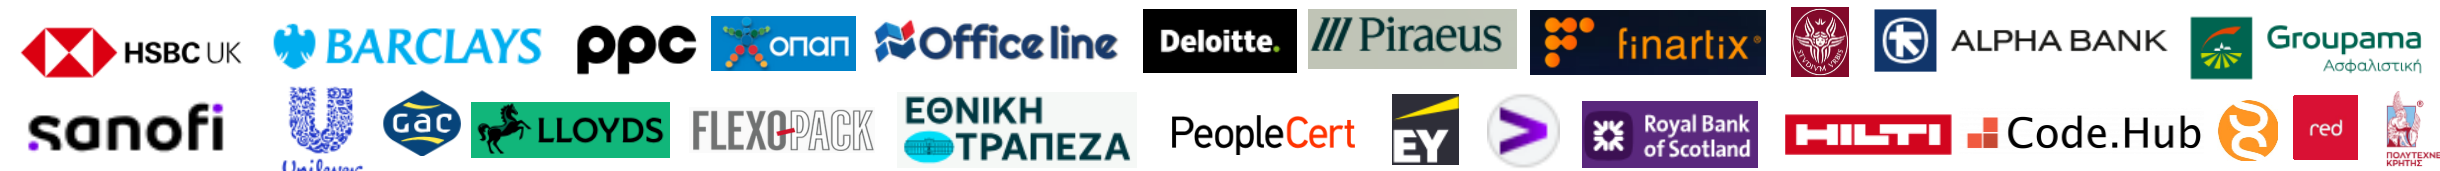

My work rests on one simple promise: helping you understand what truly drives your operations, so you can make faster, smarter and more confident decisions.

With over 20 years in Data and Analytics across 30+ European organizations, in roles such as Data & Analytics Manager / Architect and Data Analyst, Scientist & Engineer, I've learned that transformation doesn't start with technology. It starts with people who want to see their business differently.

This deck shows how I approach analytics, the value it unlocks and the impact you can expect from our collaboration.

Matt Protopapas, PhD

Founder, Kedros Analytics

Some of the organizations I've worked with – either as an employee, a consultant /contractor, an employee of a consultancy firm, or a sub-contractor of another service provider.

THE PROBLEM

Most companies don't lack data. They lack clarity

Are you confident you can tell what has happened in your company, why it happened, and how to best tackle the potential challenges?

The relevant information may exist – but sits there unused.

Scattered information across files and tools

Manual reporting that eats the team's week

Insights that arrive too slowly to matter

Low analytical maturity across departments

No link between data and actual decisions

THE GAP

Tools alone don't close the gap between data and decisions

Organizations invest in dashboards, AI and integrations, yet the important questions remain unanswered. The result:

01

Decisions made too late

By the time the numbers are assembled, the moment to act has passed

02

Teams acting on instinct

Experience is valuable — but without evidence it becomes guesswork

03

Opportunities lost in the noise

Margins, stock-outs and leads slip by unnoticed in the daily grind

Kedros Analytics bridges exactly this gap

WHAT I DO

I help build analytical engines that drive action

Analytical processes, reporting apps and AI-ready data platforms that improve performance, reduce operational friction and let your teams act with confidence.

→ **Reveal what truly drives performance** — the levers behind your numbers, not just the numbers

→ **Deliver insights automatically** — to the right people, across teams, without manual work

→ **Empower decision-makers** — with clarity and confidence at the moment of choice

→ **Lay AI-ready foundations** — so chatbots and agents can speak your business language

HOW CAN ANALYTICS HELP?

Example use cases & AI generated demos. Everything designed to facilitate tangible business decisions.

Operations	Finance	Marketing
<u>Inventory optimization</u> How much of each product to order, and when — freeing cash without risking stockouts.	<u>Capital Budgeting</u> Which capital projects to fund, and which to reject, based on value created rather than IRR alone or who tells the best story.	<u>Customer profiling and segmentation</u> Which customer segments to target with retention or win-back campaigns, and which to leave alone.
<u>OTIF and logistics visibility</u> Which carrier lane to renegotiate, which SKU needs safety stock, and which warehouse dock to go and look at.	<u>Working capital in inventory</u> Where to release cash tied up in excess inventory, and where to invest more to stop stock-outs eroding revenue.	<u>Market basket analysis</u> Which products to bundle, promote together or place near each other.
<u>Quality Control with Lean Six Sigma</u> Monitor and decide when to redesign the process and decide if costs & rework justify further investments.	<u>Portfolio optimization</u> Whether your current portfolio is genuinely diversified or quietly carrying risk that isn't being paid for.	<u>Lead scoring and valuation</u> Which channels to fund, and which are quietly wasting marketing spend.

WHY KEDROS ANALYTICS

Clarity, delivered fast

- ✓ Over 20 years in Data and Analytics
- ✓ Proven track record with major organizations
- ✓ Broad cross-sector experience spanning diverse industries and business lines
- ✓ Full-stack delivery: from pipelines to analytics, to boardroom-ready dashboards
- ✓ AI as a tool – not as a hype machine

HOW WE CAN WORK TOGETHER

Consulting

Guidance through every step of your analytical journey

End-to-end projects

Data pipelines, reporting apps and AI-powered analytics, integrated into your decision & operational processes

Training

Tailored Data and Analytics training so your people can analyze and act on data themselves

SMALL & MID-SIZED COMPANIES CAN ACHIEVE SIGNIFICANT RETURN ON INVESTMENT

Think advanced analytics is only for big companies? Think again

Modern AI tools have collapsed the cost and time of building serious analytics. What used to take an enterprise team and an enterprise budget is now within reach of every SME.

More than 10×

faster delivery than traditional analytics projects

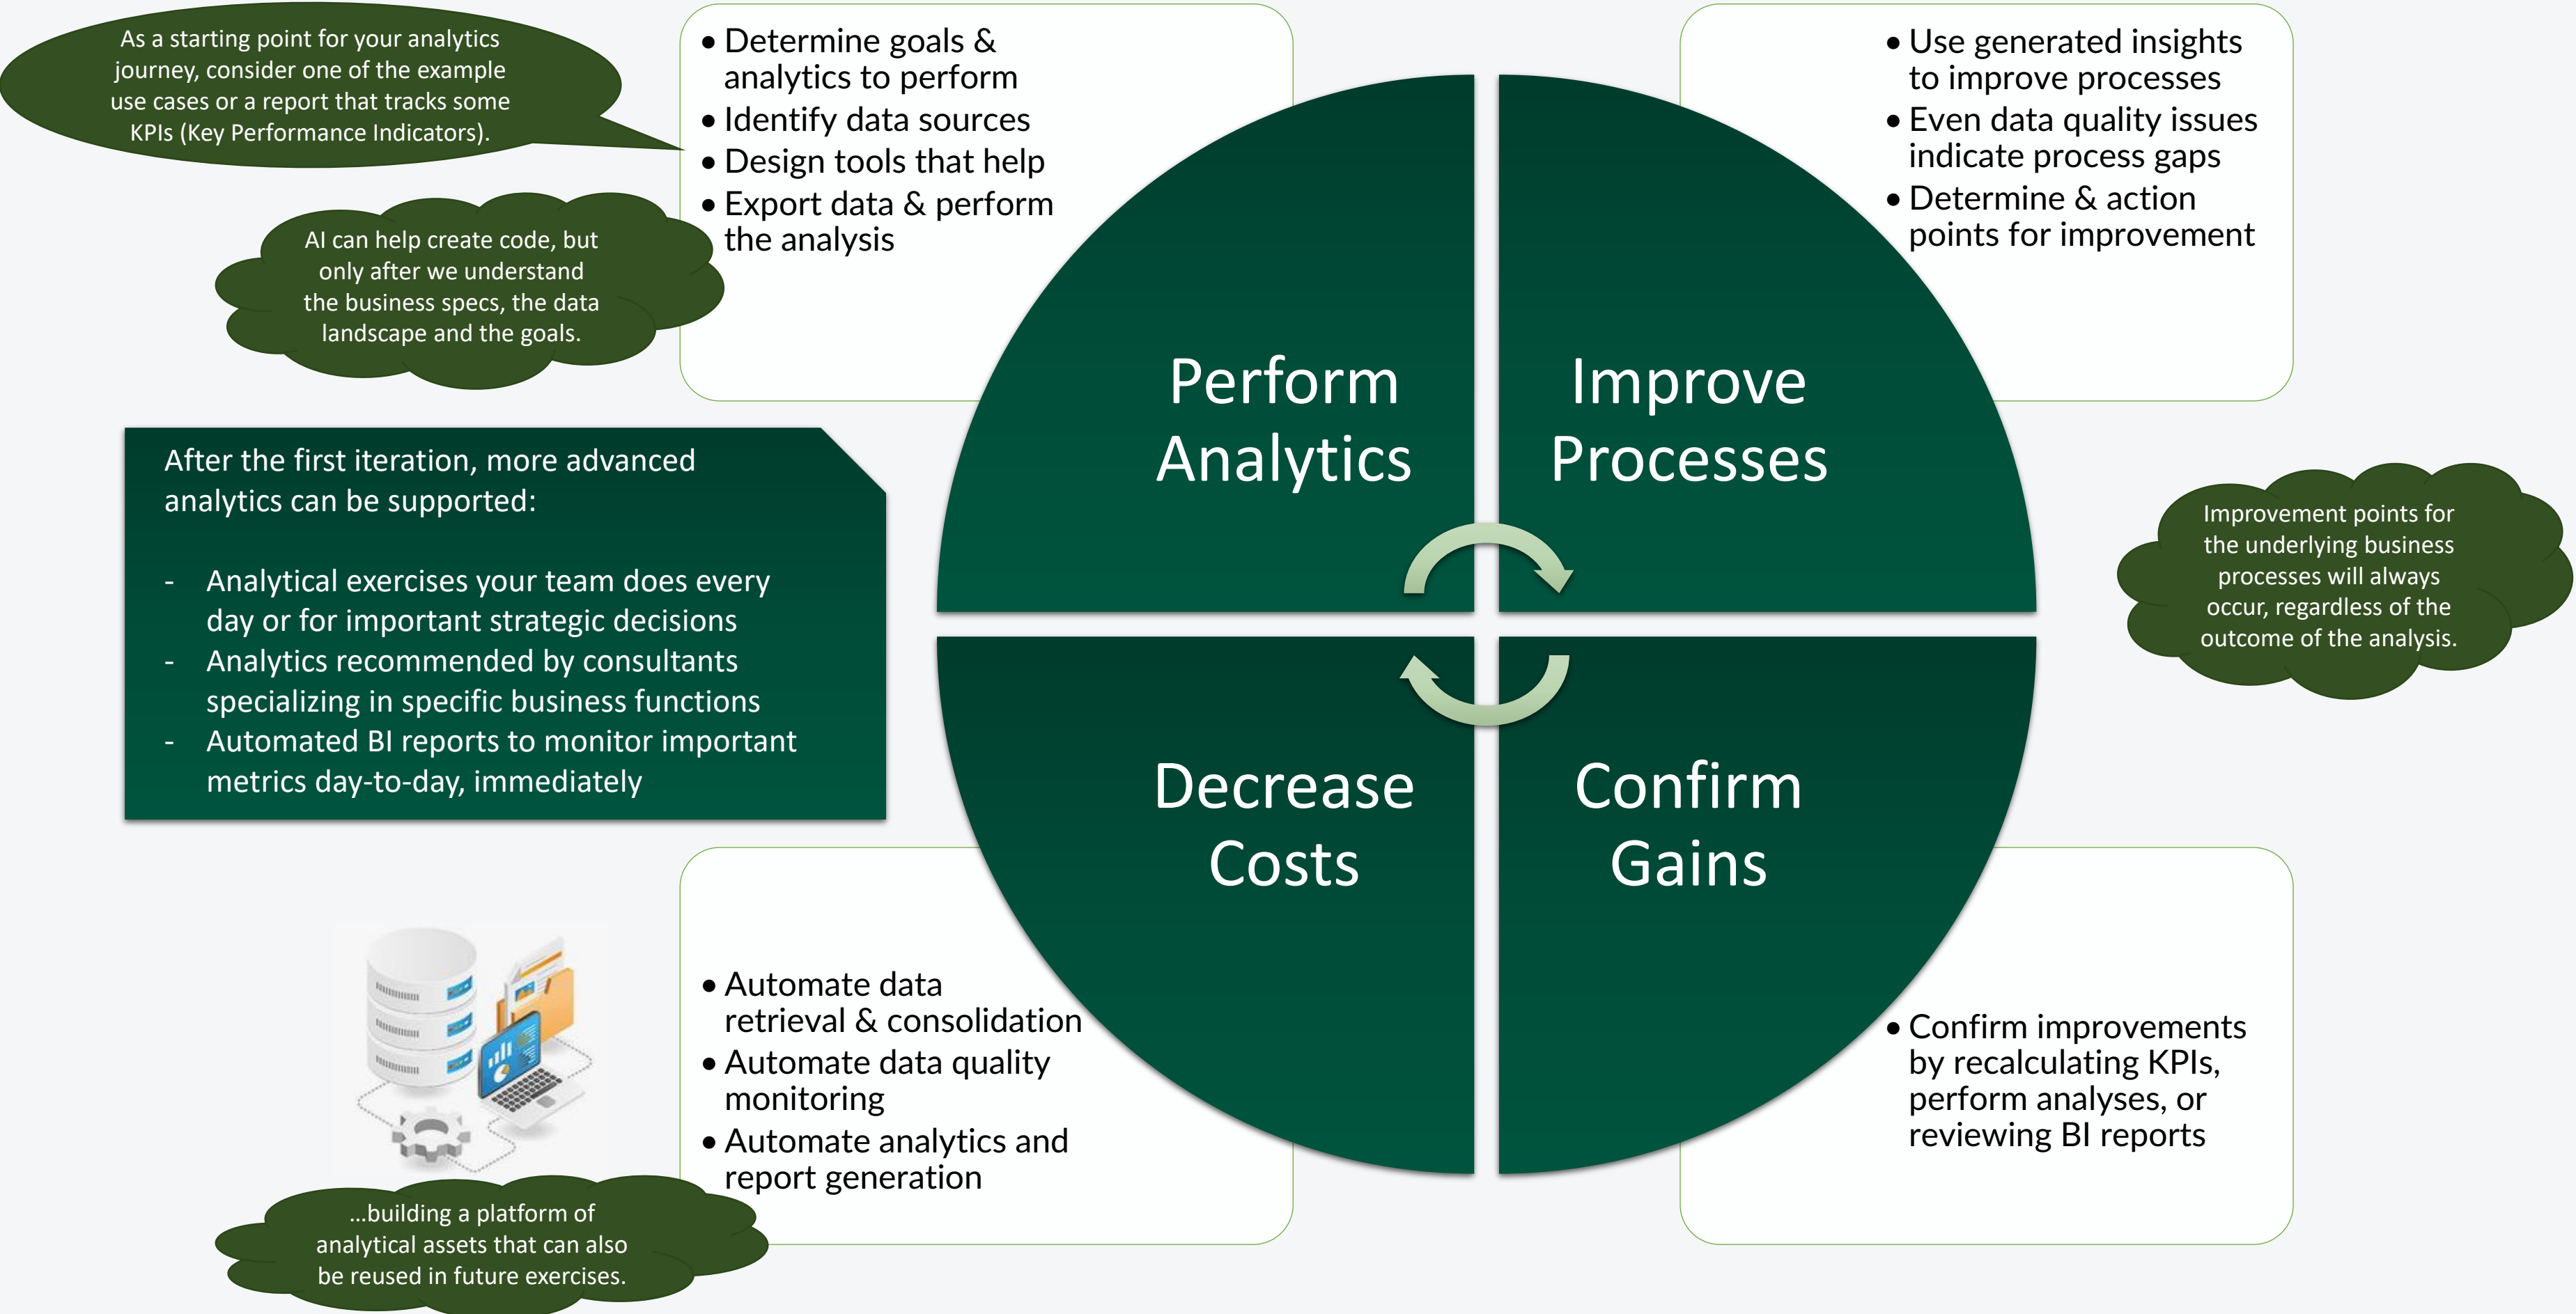

A fraction

of the traditional cost — without cutting corners on quality

AI-powered insights

Chatbots can deliver insights seamlessly
Agents can leverage them autonomously

...AND CONTINUOUSLY IMPROVE BUSINESS PERFORMANCE WITH OUR PROCESS

WHAT YOU GAIN

Lasting capability, not a one-off report

A culture of data-driven decisions

Teams learn to ask better questions, interpret insights and turn analytics into real actions

A self-service analytics ecosystem

Clean, unified datasets and reusable models let every department explore data with speed and accuracy

Automated intelligence at scale

KPI engines, predictive insights and diagnostics replace manual processes and reveal the why behind performance

Context-aware AI capabilities

An AI-ready infrastructure where chatbots and agents understand your business language and support daily work

A platform for long-term growth

Every analysis, report, and AI agent becomes part of a platform built for expansion and continuous improvement.
We can also discuss about a potentially free PoC (Proof of Concept), tailored to the requirements & the maturity level of your company.

Selected projects

Fortune Global 500 company Supply chain control tower	A balanced scorecard and OTIF dashboards with a Loss Tree and key drivers, a 3PL performance reporting pack, and a refactor of the Power BI and Snowflake models around dimensional modelling principles Reports more than twice as fast, at roughly half the capacity cost
Fortune Europe 500 company Data lakehouse and e-mobility BI	Led the migration to a Microsoft Fabric Medallion lakehouse, built the semantic model and DAX measures, and delivered Power BI reports on charging station utilization, availability and revenue — with automated data quality controls One consolidated view of e-mobility performance, with governed self-service for analysts
Global manufacturing company Analytical products for an AI-powered app	Designed a Microsoft Fabric data architecture and an AI-ready semantic layer so chatbots answer real business questions accurately, and introduced an AI-assisted engineering workflow for the team Order-of-magnitude team productivity gains and markedly faster queries

TESTIMONIALS

What clients say about working with me

“

I hired Matt to develop advanced custom Power BI solutions. He successfully managed complex data requirements and delivered BI reports that met our technical specifications

Javier Fernandez Linares

Global Supply Chain Analytics Manager,
Fortune Global 500 pharma

“

We had the privilege to co-operate with Matt, an excellent professional with out of the box thinking and always willing to assist. I do recommend Matt for complex projects

Ioannis Fousteris

Group ICT Director, leading Greek
manufacturer

“

I worked with Matt for over a year to create advanced BI reports. I like his ability to connect with people, his professionalism and team skills and I recommend him for any such role

Angelos Paidas

Head of e-Mobility Products and
Services, Fortune Europe 500 energy

Want to make better decisions, faster?

Let's spend thirty minutes on your issues — no commitment, no jargon. You'll leave with at least one idea you can use, and we might even go on and plan a completely free PoC.
