LEAD CONVERSION AND VALUATION

Know What a Lead Is Worth

Every lead costs money. Turn your funnel into conversion rates, customer value and a clear view of which channels to feed.

THE OPPORTUNITY

Generating leads is only half the story

Every lead costs money, through ads, content, referrals or a sales team’s time.

THE LEAD COUNT

“We got 1,000 leads this month.”

That is where most reporting stops, even though what drives growth happens after a lead comes in.

THE FUNNEL

How many convert, how fast, and what each is worth.

What a lead costs, what opportunities it creates and what an average customer is worth: the basis for deciding on paid ads or a new hire.

WHAT IT IS

From “we got 1,000 leads” to “here is what each one is worth”

Conversion at every stage of the funnel, plus the lifetime value of the customers it produces.

1

Your leads

One row per lead: source, industry, revenue, employees and created date.

2

Validate and run the funnel

Bad rows are caught. The rest move from Lead to Opportunity to Customer.

3

KPIs and value

Conversion at each stage, customer lifetime value and value per lead.

Demo: 100 synthetic leads become 40 opportunities and 14 customers.

WHAT YOU GAIN

Six ways it pays off for a small business

1 Measures marketing ROI

Shows which channels produce customers, not just leads.

2 Improves sales performance

Reveals where prospects drop out, so follow-up and messaging can improve.

3 Optimizes marketing spend

Points limited budgets at the highest-converting campaigns.

4 Increases revenue

Small conversion gains lift sales without generating more leads.

5 Enables forecasting

Historical conversion rates help predict sales and cash flow.

6 Knows your customers

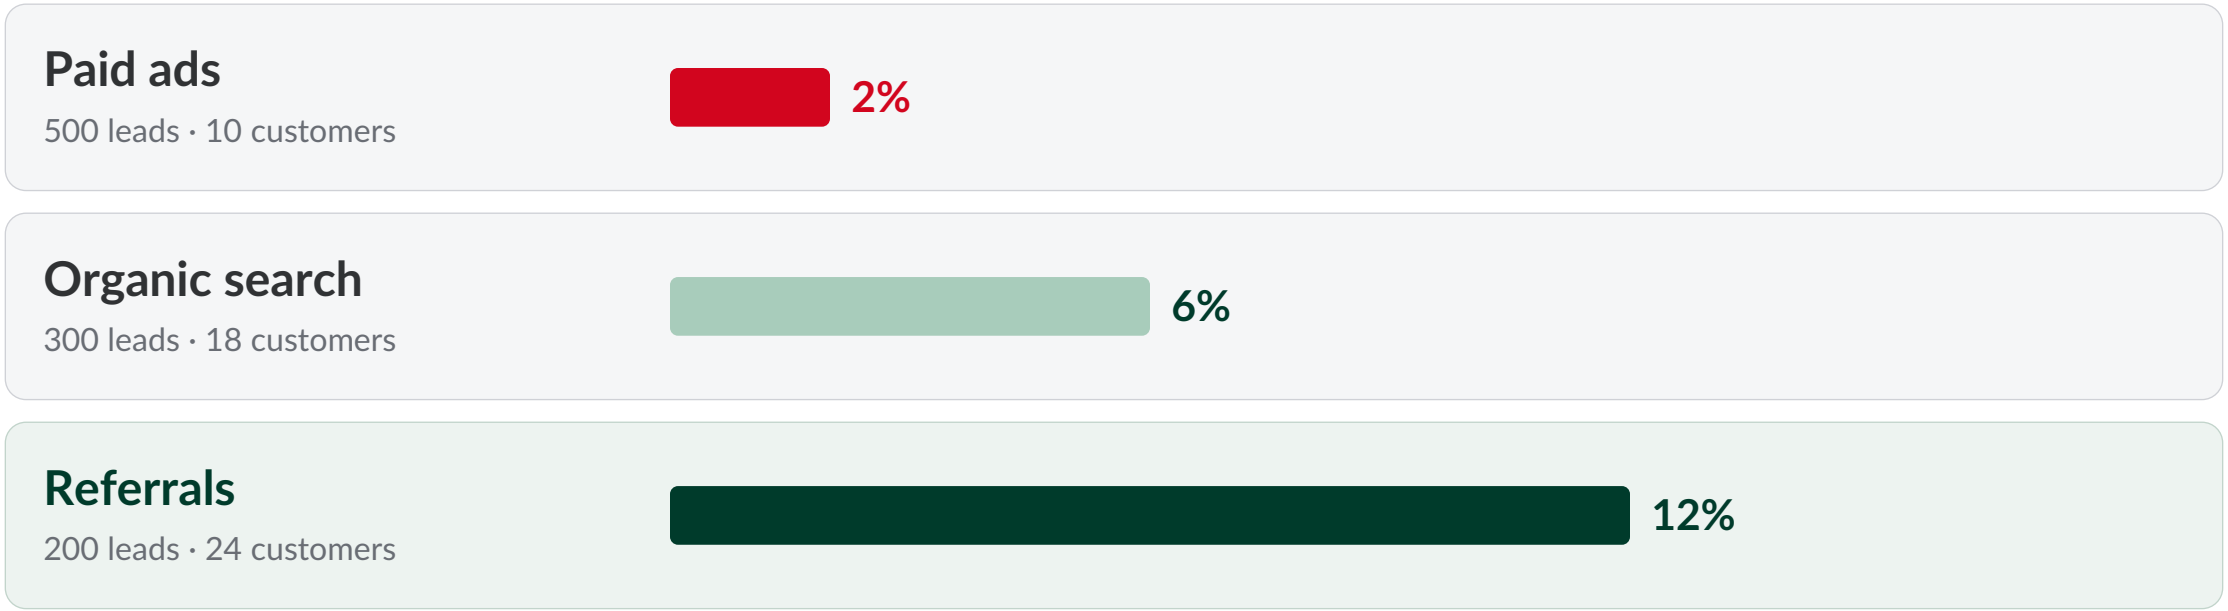

Shows which segments, industries or demographics convert best.

Highlighted: the two that unlock revenue from effort already underway.

EXAMPLE RESULTS

Referrals convert six times better than paid ads

Lead-to-customer conversion by channel for a fictitious cosmetics e-shop with 1,000 leads a month.

No extra spend needed: just better allocation of the spend already happening.

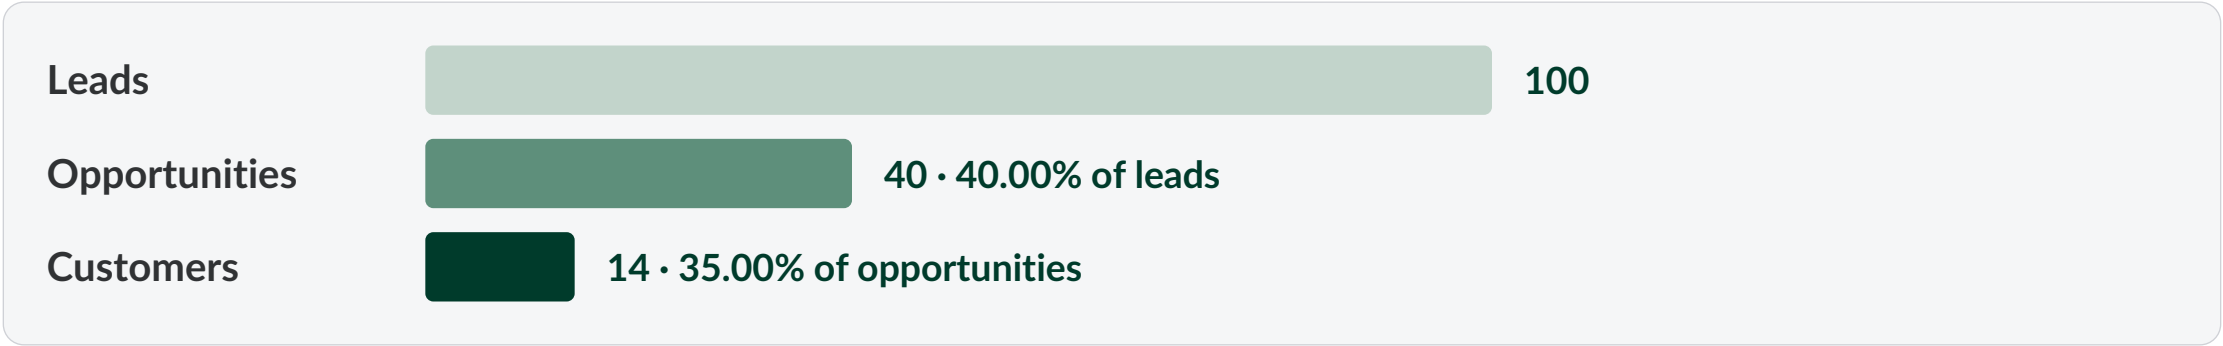

Fictitious example. Bars scaled to conversion rate.

Kedros Analytics

THE DEMO FUNNEL

Where a lead drops out tells you who should act

Demo batch: 100 leads, 14.00% end to end.

Lead to opportunity: 40.00%

Reflects lead quality and targeting. A low number is usually a marketing problem upstream.

Opportunity to customer: 35.00%

Reflects sales execution: pitch, pricing, follow-up speed. A low number is a sales-process problem.

Synthetic demo data. Bars scaled to lead counts.

Kedros Analytics

THE VALUE NUMBERS

Value per lead is the number to hold against cost per lead

Lifetime value of the demo batch, from lead down to customer.

VALUE PER LEAD

$735.26

Compare it with cost per lead.

A channel costing $50 a lead, with the average lead worth $735, is very likely worth it.

VALUE PER OPPORTUNITY

$1,838.15

What a qualified lead is worth.

Guides how much sales time an opportunity deserves.

AVERAGE CLV PER CUSTOMER

$5,251.87

The ceiling for CAC.

The LTV:CAC ratio investors and lenders want is built from it.

TOTAL CLV

$73,526.16

From 14 customers.

The payoff of the whole funnel, not a headcount.

Conversion rate says how many customers you win. CLV says whether they are worth winning.

BUSINESS IMPACT

One extra point of conversion is worth 20% more revenue

500 leads a month, a $1,000 average sale and no extra lead-generation spend.

+20%

monthly revenue, from the effort already underway.

25 → 30 customers

Conversion rising from 5% to 6% on the same 500 leads.

$25,000 → $30,000 a month

From better follow-up, a clearer pitch or reallocated spend.

Illustrative example, not a forecast.

GET STARTED

What to do this week

Five steps from a lead export to a spend decision.

1

Export

Leads from your CRM or spreadsheet: source, industry, revenue, employees, created date.

2

Validate

Catch email typos, blank required fields, negative revenue and duplicate lead IDs.

3

Measure

Start with overall conversion and conversion by channel: fastest to set up.

4

Compare

Value per lead against cost per lead, and average CLV against acquisition cost.

5

Act

Shift spend to the channels that convert and fix the weakest funnel stage.

Step 4 matters: none of these numbers mean much until compared with your real costs.

KEEP IT HONEST

The limits worth keeping in mind

A starting point for the mechanics of conversion and CLV, not a production analytics tool.

1 Demo conversion is random

A random draw decides who converts. Real use plugs in a scoring model or historical behaviour.

2 Needs your real costs

CPL, CAC and sales time live outside the demo. The ratios mean little without them.

3 Real data is messier

Demo data passes every check. Real exports bring typos, blanks, negative revenue and duplicate IDs.

4 CLV is an estimate

In the demo it comes from configurable assumptions, not observed customer behaviour.

HOW KEDROS ANALYTICS CAN HELP

Try it on your own data, with a free proof of concept

Business questions first, AI as a tool and not a hype machine, and results you can act on straight away.

1

Validate

Check your CRM export for bad emails, blank fields, negative revenue and duplicate lead IDs.

2

Measure the funnel

Conversion by channel and by stage, with value per lead and average CLV.

3

Reallocate and track

Move spend toward what converts, fix the weakest stage, and track the results.

Free PoC: tailored to your requirements and your company’s analytics maturity.

Kedros Analytics

Ready to value leads and opportunities?

Let’s spend thirty minutes on your lead data. No commitment, no jargon, and we might even plan a free PoC.
